PVC Parts

Drift Eliminators

Fill Media

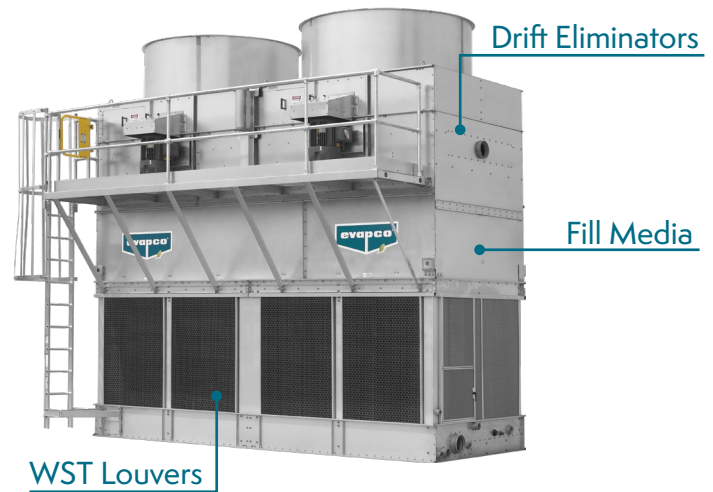

Water & Sight Tight Louvers

Available For ALL Manufacturers' Cooling Towers, Closed Circuit Fluid Coolers and Evaporative Condensers

Visit our website at <https://www.evapco.com/find-your-representative> for the Mr. GoodTower® Service Center or Representative near you.

Restore Your Equipment's Performance

Improve Efficiency

- Drift eliminators minimize water droplet loss, improving water conservation and system efficiency.
- PVC fill enhances cooling efficiency by increasing surface area for water and air contact, improving heat transfer.
- Air inlet louvers optimize airflow and keep sunlight out of basin.

High Durability

- PVC materials offer durability and corrosion resistance, ideal for harsh cooling tower environments.
- PVC fill, air inlet louvers, and drift eliminators are designed for continuous operation, ensuring long-term reliability.
- These components require minimal maintenance, contributing to efficient cooling tower operation.
